

Hello students, my self Dr. Anil Thosare Associate

Professor in education from Vidya Prabodhini College of

Commerce, Education, computer and Management Parvari goa today

we are going to deal with this subject. There is school and

classroom management unit, #2school and classroom environment

in that model.

Factor affecting on classroom climate. So in that, what is the

classroom climate and what are the different factors affecting

on the classroom climate that we are going to learn? So classroom

climate classroom climate.Sometimes it refers to learning

environment as well as by terms such as atmosphere, ambiance,

ecology, the impact of classroom climate on students and staff

can be beneficial for or barriers to learning means both the way

you will find the classroom climate. It is beneficial for

the students and staff also.

Beside that it is a barrier to learning also teacher student

interaction during the lesson,Sinhala consistent flow of

information concerning their perceptions, expectations,

attitudes and feelings about each other and the learning

activities at hand. Classroom Climate consist of so many sub

variables that affect students achievement in schools. Some

such variables are physical appearance or layout of the classroom teachers teaching behavior. Instructional materials utilization, then classroom climate, and this classroom climate consist of a set of internal characteristics that distinguish one school from another. An influences the behavior of the people in it.

Classroom. Climate requires some positive changes to facilitate learning an achievement. You Will find the different factors that affects on this cool climate. There is no consensus on the definition or the dimension of school climate, however. The factors that shape school climate are often grouped into four main dimensions. These Dimensions are first one that is a safety second one teaching and learning, which is called also academic climate. Third one relationships 4th one the environment. So first we'll see there is. What is the safety? Is there the physical safety of the students? Violence, aggression or physical billing for these?

Strategy, you can eliminate the different violence is for that purpose. You can use the different security guards or the and the metal detector sophysical safety is very much important when it comes to this classroom climate that effects

on the teaching learning process of the students, then second one, there is a identity, safety parties identity, safety pertain to a human TT being an asset in the classroom rather than a burial. These refers to how are school can promote.

Positive relationships and opportunities to learn where students feel they are welcome,so students identity safety is very much important and that impact on the school climate.

Next one there is a emotional safety in emotional safety. It includes the available school based mental health services.

Sometimes you will find in school there are some counseling centers. Are there other counseling services are there so that is very much important toCal the emotional safety of our students. So that counseling services are there caring and supportive. Stop is also important. Then order and discipline these order and discipline refer to how often students break this school's rule and how misbehavior is handled. So sometimes you will find the students they're having the misbehavior in the class orin the school. So how to deal with such a student? So so for that purpose the schools with a positive climate have a lower rate of misbehavior.

And clearly communicated rules that students consider to be

implemented fairly and consistently. Second, a factor which affect on the school climate, their teaching and learning. There is academic climate in that the leadership leadership refers to the role of the principle and administration. It is influenced by how, when they communicate their vision for the school and how supportive an accessible they are, so their role is very much important when it comes to the teaching learning.

But in the school climate, then actually that in classroom teaching, other teaching, learning process, the teaching, learning refers to actual methods, an instructional practices used by the teacher in their classrooms is entails everything from the curriculum, selected evaluation methods to how teachers communicate, their expectation, and give feedback to students. These practices influence students motivation and engagement in the classroom.

Which is in turn affect the academic performance. Then this is related to the teachers professional development. This Professional development refers to the teachers access to training programs they find relevant and helpful and that are in the line with the needs

of the school. In schools with a positive climate teacher, how ongoing access to the training where they can learn new strategies to improve the way that is so in the training part teacher can do have their professional growth and accordingly. They can use the new technology new strategy in the methodology or in the evaluation process. They can use in the daily teaching. So third factor is relationship that is a community climate. Relationships Refers to the quality and consistency of relationships among the students, staff member and between the teacher and students. School climate is affected by how much students and teachers support trust, respect and care for each other. The relationships between the adults. In a school, for example, teachers and principals also has an important influence on school climate, then connectedness. It is referred to the students feeling of attachment and belonging towards the school. Filling accepted an included by the other member of the school, will contribute to the positive school climate, so students and the teachers they are connected with, the schools and that feeling that is accepted and included by the other member of the. Schools then respect further diversity, respect for

diversity refers to treating members of any ethnicity, gender, sexual orientation, or religious affiliation equally.

It also means cultivating awareness and appreciation for the other cultures in classroom, then Community Partnership, Community partnership. Refer to the involvement of parents and other community members in the school life. It involves good communication between parents.

Full stop, high attendance of school events. The development of mentoring programs and other initiatives that will relationship between students and the larger community and the 4th last point, the environment. The environment adequacy refers to the physical characteristics of the school, such as cleanliness, lighting and temperature and sound control, which all effects on the teaching and learning then structural organization. Is the physical layout of the school.

It's a size, classroom size, number of unsupervised areas. It also include organizational aspects such as start an end times an whether students are grouped based on ability. These characters six can influence both feeling of safety and academic performance. So how the structural organization of the physical layout of the school where you can feel this classroom

size, how the different.

Resources are there physical resources in the classroom and

how the climate of that particular classroom? It is very

much important and such a start and end times whether students

are grouped based on the ability then availability of resources,

availability of resources refer to how much Axis students and

teachers have to equipment, material and supplies that

improves teaching. For example, what are the different

availability I resources? Are There they refer?

How the students and teacher they can access the different

resources. For example, technology tools or the

different books are there, so these are the four important

factors that affect on the school climate. Thank you.
